Jacks Lose Bitter Fight To Winnipeg Machine

In two games, in which basketball fans paid nearly \$800 admission, the Union Jacks, provincial champions, suffered defeat in the Dominion elimination contest at the hands of the Winnipeg Teilers last Saturday and Monday nights.

The close finish in the first match, seen by a packed house, in which the Winnipeggers finished with only a four point lead, score 42-38, brought an even larger attendance the second night. And fans were not disappointed in their expectations of seeing the most thrilling and hard-fought contest ever played on the local floor. Both games were exhibitions of skill, speed and endurance such as one would never expect to see outside of professional teams.

Saturday night's game opened with a dazzling burst of speed on the part of the Jacks which gained them 6 points in quick succession, and which bred high hopes in the hearts of supporters that the series would fall easily to the Alberta team. However, the Teilers evidently recognized that here was no child's play, and fell into a machine-like activity which soon overcame the handicap and at the end of the first half had the heavy end of a 25-20 score.

In the second half the Jacks again found the basket and by the time the Teilers had reached 31 points the Jacks had them tied.

Ferguson, who jumped for the 'Peg, starred throughout the game and scored 17 points. He is the fastest player ever seen on the local floor, with the exception of Norton, of the Minneapolis Globe Trotters, who played here two years ago. Had he not been of professional calibre the end of the story would have been different. Meldrum did the main scoring for the Jacks. He also scored 17 points, but was forced to somewhat favor his hand which was broken ten days ago. It is curious to note that both teams missed enough free throws to double the lead on one hand, or tie the score on the other.

On Monday night both teams ran on to the floor prepared to play the hardest game of their careers. Neither were disappointed. Both admit it. As in the first game the Jacks began scoring and in five minutes of play had scored 4 points overcoming the lead of the previous game. Then began the most relentless series of attacks and counter attacks ever seen here. Both teams settled into a gruelling, heart-breaking pace in which physical condition was bound to tell the tale. The Manitoba machine exercised its full force and strategy and soon overcame the Jacks lead. The Jacks tied the score, but in the last minute of the first period the Teilers tossed a field throw into the cage and walked off with a 2-point lead—12-10.

In the second period the terrific pace continued. Checking was so vicious on both sides that at nearly every encounter men were thrown to the floor. The Jacks put every ounce of energy they possessed into this half, and in spite of the Teilers best efforts and skill, had gained a margin of 6 points to the good, 24-18, with only six minutes to play. Then something happened. The incessant onslaught of Ferguson and his two forwards crashed through the Jacks' defense while his own guard line remained intact. The Jacks were spent. Their attacks were broken on the rocks of better conditioned men. The Teilers had in reserve a relentless burst of speed for the last few minutes of the game. They used it at the first indications of wavering on the part of the Jacks. It came with crushing and decisive effect. Only one of the Jacks—Andy Lund—showed no signs of weakening. He played the game of his life and was the real star of the series. Had the balance of the team been able to keep up his pace the Teilers would have returned home from here, notwithstanding the furious work of Ferguson, who was here, there and everywhere, and who scored 23 points alone.

But the Jacks had cracked under the strain and were unable to stop the finishing rush of the Winnipeg machine. The Teilers began dropping the ball through the hoop with amazing regularity and the final score stood 37-25 in their favor. The fact that that Fairbanks fouled himself off the floor with three minutes to go made no difference. The game was already lost. But what a game! No one expects to ever see such another stubborn, unyielding battle on any basketball floor.

Grant of Winnipeg and Woolf of Magrath handled both games satisfactorily.

NOTES

The Jacks have lost the series and their trip to Kamloops, but fans are more proud of them than ever after seeing a game such as that.

It's tough to have a game all but wrapped up, as Dave Powelson says, only to see it slip. But there is one bright spot in the darkness. The funds taken in will leave a nice financial start for the R. A. A. to begin the baseball season. An excellent suggestion comes from Mr. Powelson and Biddy Meldrum who advocate that the sum of \$150 be used for baseball promotion while the balance of proceeds be carried over to promote basketball. This sounds like a very fair arrangement. It will be discussed at a meeting to be held at King Motors next Sunday at 4 p. m. If you are interested be there.

With basketball gaining so rapidly as a popular sport throughout the country, and with more teams coming into existence each season, it is somewhat doubtful that Raymond ever will figure in the Dominion finals. However, the provincial championship will be nothing to be sneezed at. And further, judging from the strides the Temple City has made in the game during the last two seasons, things might become interesting quite close to home next winter.

WORLD HAPPENINGS BRIEFLY TOLD

Major General Sir Granville Ryde has been appointed Australian High Commissioner in London. He will succeed Sir Joseph Cook, who is to retire after many years of service in that post.

Premier Mackenzie King assured the House of Commons an extension of time would be granted this session to which civil servants might object to come under the Budget Act for re-organization purposes.

Home Minister P. J. Aulic of Japan announced that 3,271 persons were killed and 6,731 injured, and that 82 per cent of the buildings in the affected area were wholly or partially destroyed in the recent earthquake.

The report of a depth of 100 ft. in the waters of the National Park and another, 100 ft. in the waters of the National Park, are being brought to the attention of the government in the provinces near Spanish Bridge.

Manitoba officers are calling for a new and second-hand car for the province to use in the coming year. The car is to be a Land Rover, a new model of the Canadian Pacific railway, and a new model of the car.

Canada has new records. Captain J. J. Macdonald, of the Canadian Pacific, has been awarded the Victoria Cross for his service in the Canadian Pacific. The award was made by the Governor General.

The City of London has a new record. The first class aeroplane of the British Empire Airways will be the first to fly from London to Toronto. The flight will be made by the Empire Airways.

In a letter received by Sir J. J. Macdonald, commander of the Canadian Pacific, he has been awarded the Victoria Cross for his service in the Canadian Pacific. The award was made by the Governor General.

Chinese Characters by Telegraph

Adapt New System That Makes Possible Transmission of News in Chinese Language

The Chinese government has adopted the new system of telegraphy. This makes possible the transmission of Chinese characters by telegraph for the first time, according to the government, who has just returned to Paris after a trip to the Manchurian war front.

Because an alphabet does not exist in Chinese, there being some 40,000 characters, it is necessary to use a system of telegraphy. This makes possible the transmission of Chinese characters by telegraph for the first time, according to the government, who has just returned to Paris after a trip to the Manchurian war front.

General Chang has set his technicians to work installing the new telegraph system by which the actual photograph of the message is transmitted, as in France, where the system was installed a year ago.

Making a Last Stand

London Writer Says Russia's Destiny Being Fought Out in China

Trotsky with extreme cleverness, has declared that it is the theory of world revolution is abandoned. Socialism cannot maintain itself even in Russia. The idea that the British Empire can be finally injured in China is the very last hope for the theory of world revolution already crushed in Britain, France, Germany, Italy, Japan and elsewhere, not to mention the United States. The destiny of Russia itself is being fought out in China. J. L. Garvin in London Observer.

Manitoba Good Roads

The province of Manitoba has expended \$7,415,551 on good roads since the incorporation of the province, according to a return tabled in the Legislature by the Hon. W. R. Chubb, Minister of Public Works. Mainline roads in the province have increased from 1,100 in 1920 to 1,100 in 1920, according to the inauguration of the provincial trunk highway system.

The funeral of the late Emperor of Japan cost \$2,000,000, says a dispatch. No wonder the people shout "Long live the emperor."

W. N. P. 1674

Good Health Is First Essential

Tremendous Economic Loss to Canada Through Preventable Diseases

Canada pays heavily for her unnecessary disease. The annual toll which Canadians foot for preventable illness has now become a tremendous burden.

These facts were brought home to a representative group of prominent Canadians at the conference of the advisory board of the Canadian Social Hygiene Council, held in the House of Commons.

Half of the 18,000 cases of illness now reported annually are preventable, Sir George Foster told the conference. Thirty per cent of deaths are also preventable. Each year, in the Dominion, 10,000,000 days of labor are lost unnecessarily through illness.

His Excellency, the Governor General, who is a strong believer in voluntary health work, was one of the outstanding speakers. Hon. Dr. King, Minister of Health, with whom the conference was called, was another who had a prominent part in the proceedings.

"Good health is the first essential of a viable nation," said the Governor General.

He gave it as his own experience that he had always found the work of voluntary organizations of great assistance to governments.

Sir Arthur Currie, principal of McGill University and chairman of the board, also stressed the necessity for official recognition of the importance of public health. He characterized it as the first duty of the state and held that good health was largely purchasable through the application of the knowledge we now possess.

He, too, referred to the tremendous amount of preventable illness and the huge economic losses for which it was responsible. In Montreal, the number of cases of preventable disease per annum was reported to be in the neighborhood of 20,000.

These opinions were summed up in a motion put forward by Sir George Foster which passed unanimously. It declared that, in spite of the magnificent results achieved by health authorities in cutting down mortality rates, preventable illness and death still remain a very costly item in our national expenditure; preventable disease fills hospital and institutional beds unnecessarily and is a factor in the creation of various social problems of a costly nature. In view of these facts, the conference went on record as endorsing voluntary and governmental efforts to conserve health and life as well as the expenditure of voluntary and public funds for the purpose.

Britain's Labor Problem

Urges Pensioning Workers at Age of 65 to Make Room for Able-bodied Unemployed

The pensioning of workers over sixty-five years of age to make room for Britain's young able-bodied unemployed was a suggestion made by Lady Cynthia Mosley, wife of the Laborite member of parliament, Sir Oswald Mosley, at a Laborite meeting. There were nearly 600,000 men and women, aged 65, whom it would be better to pension, according to their places part of England's 1,500,000 unemployed. The money saved from unemployment doles would pay the pensions, she said.

House on Turntable

French Architects Design House With Unique Feature

A house on a turntable, to follow the sun, is proposed by prominent French architect.

A model exhibited at Nice shows a villa mounted on a modified railroad turntable, with an electric motor to enable the occupants to turn the house at will. A strong pivot is designed to resist wind pressure.

The original model provides for a \$50,000 house, with the turntable feature costing \$5,000, but cheaper designs are provided with the turntable only costing about \$800.

A Medical Error

Doctor McTavish had worked hard to put his boy Sandy through medical school. When Sandy graduated and returned home, the old doctor turned his practice over to the boy and took a well-earned vacation.

Upon his return he was greeted by Sandy at the station, who said:

"Father, I've made some marvelous cures. I even cured Mrs. MacGregor's stomach trouble after you had treated her for four years!"

"What?" exclaimed the old doctor. "I'll have you to know that Mrs. MacGregor's stomach put you through college!"

While the number of day scholars in London elementary schools is steadily decreasing, the students at evening classes are increasing by 10,000 a year.

Will Work Together

Over Mining Problems

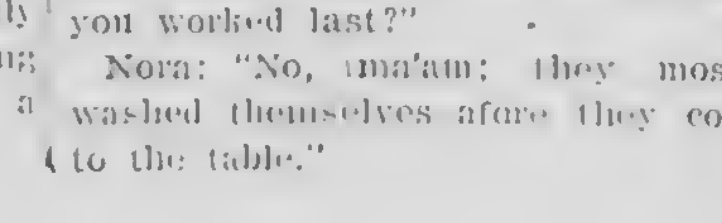

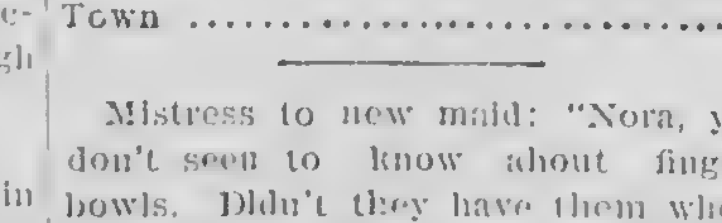

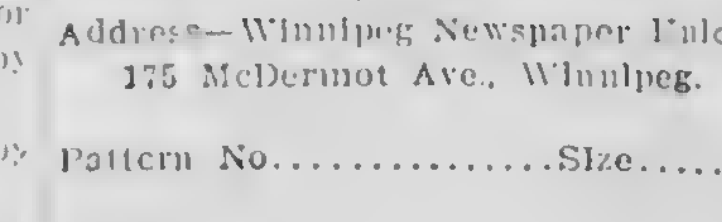

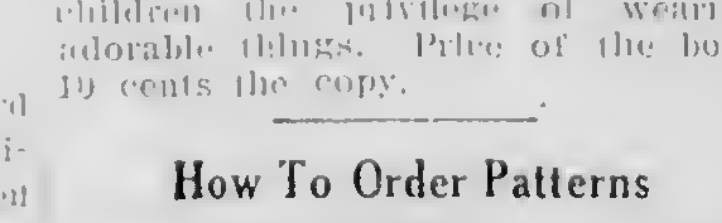

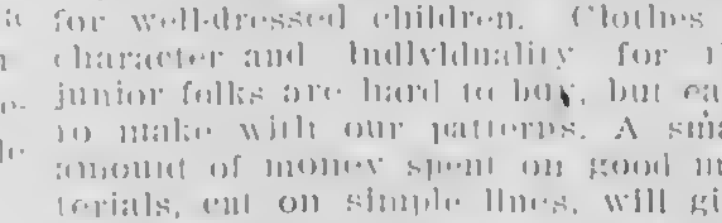

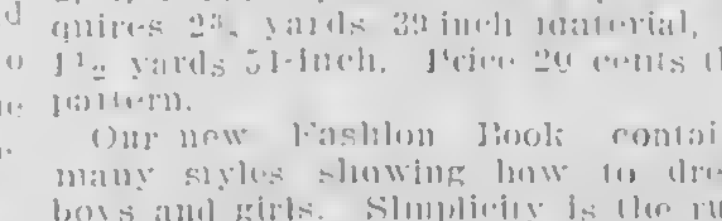

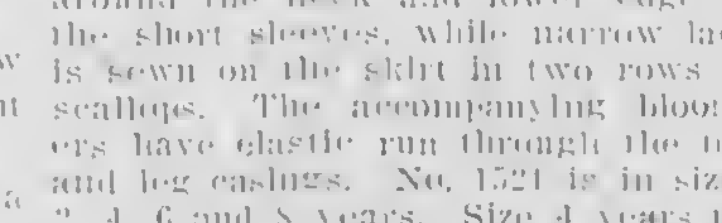

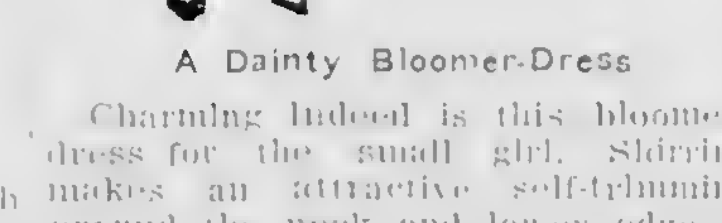

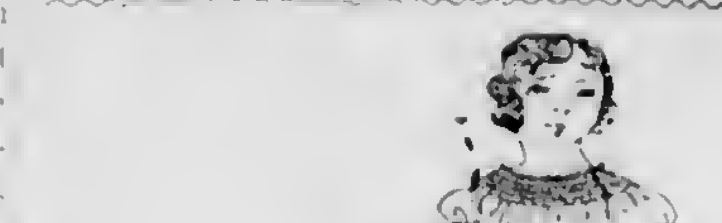

U.S. and Canada Have Many in Common and Can Reduce Expense by Co-operation

Vancouver Province: An agreement has been reached between the department of mines at Ottawa, the Dominion research council and the United States bureau of mines for close co-operation in the investigation of problems affecting the mineral industry of the two countries. This agreement should prove of the very highest value. So far as the recovery of minerals is concerned, and their utilization, Canada and the United States have many problems which are identical, and others that are very similar. It would be a mere waste of effort and money on the part of the two governments to set up separate and independent establishments to investigate the same questions, when co-operation might easily bring earlier results at smaller cost.

Even between countries so widely separated as Great Britain and the United States, co-operation in seeking solutions to mining problems has proven of value. For some years, the United States has had a couple of men in England, and there have been one or two British representatives in the United States, striving to co-ordinate the work of the two countries. Dr. Dorsey Lyon, chief metallurgist of the United States bureau, has stated that the United States has reaped very great benefit from the work done in the republic by some of the British representatives, and has expressed the belief that Britain benefited also from the work done there by the American scientists.

Between Canada and the United States there has been much co-operation and exchange of result in the past. Now the co-operation is to be made official and a matter of policy. It is not thought an exchange of investigators will be necessary, since the two countries are so close together that they can easily keep in touch with one another.

Bishop Sherman Has He-Man Job in West

To familiarize himself with a diocese of 100,000 square miles, an area nearly double the size of England, is the work ahead of Dr. L. Ralph Sherman, Anglican Bishop-elect of Calgary, who will have among his parishioners the Prince of Wales through the fact that His Royal Highness operates a ranch at High River. Dr. Sherman, who, prior to his elevation was Dean of Quebec and before that was rector of a parish in Saint John, New Brunswick, will thus become widely familiar with conditions both in the East and West of Canada. He travelled to his new diocese by Canadian Pacific Railway and will be increasingly using this company in his wide travels throughout his huge diocese.

Attaining Supremacy in the Mediterranean

By End of Year British Fleet Will Equal Combined Strength of France and Italy

By the end of this year British naval power in the Mediterranean Sea will be great enough to match the combined navies of France and Italy. At the same time the British power in the Atlantic will be as great as the entire French fleet, while Great Britain's control of Gibraltar enables her to coordinate forces between the two waters on a one-way basis of time for the fastest ships to steam from the Atlantic base at Portsmouth to the Mediterranean base at Malta.

These facts emerge from between the lines of First Sea Lord Beatty's memorandum to accompany naval estimates laid before Parliament.

They reveal that for the first time since the German navy began to be a menace to British sea supremacy, Great Britain has reverted to her historic naval strategy of basing the greatest power in the Mediterranean.

The Malta fleet will include ten Royal Sovereign and Queen Elizabeth class ships, all mounting 15-inch guns. This fleet will not be fully constituted, however, until the new fast vessels, Nelson and Rodney, claimed to be the most powerful warships afloat, join the Atlantic fleet which then will comprise in addition, four of the Iron Duke class and three battle cruisers.

The China squadron will be strengthened this year when five cruisers more than ten years old will be replaced by five "treaty cruisers" of the Kent class, each of 10,000 tons, mounting eight eight-inch guns, and of 31 knots speed. This fleet could be reinforced by three modern cruisers stationed at the East Indies, and will be ten cruisers strong when two Kent-type cruisers being built in Australia are ready next February.

Tourist Land Ideal

Possibly the greatest appeal of the Canadian national parks lies in the fact that notwithstanding the many conveniences introduced for the comfort of travellers through these immense virgin areas, none of the lure of the unknown has been lost. Primeval forests, peopled by hundreds of wild birds and animals, creep down to the towns in the parks and border the roads and trails. The beautiful lakes teem with fish, and the upland gardens are masses of wild flowers. Here, surely, is the tourist land ideal, where the mental and physical man may be re-freshed and invigorated.

An Amazing Treatment

The X-ray machine in use at the Christian hospital at Pyongyang, Korea, has disclosed some of the amazing treatments once practised by Korean doctors of the old school. One man recently examined had 43 copper needles lodged in his abdomen. They had been thrust in, two or three at a time, over a period of four years, as a treatment for indigestion.

Members of a religious sect in Siberia reside underground from the age of 40 until death.

Give some people half a chance and they will take the other half.

SUNDAY SCHOOL LESSON

APRIL 3

PETER BECOMES A DISCIPLE OF JESUS

Golden Text: Come ye after me, and I will make you to become fishers of men.—Mark 1:17.

Lesson: Mark 1:11-18, 29-31.

Devotional Reading: Isaiah 55:1-5.

Explanations and Comments

1. Peter Becomes a Disciple of Jesus, verses 11-18. After John the Baptist was imprisoned and his work as a herald was over (Matthew 14: 3-5; Luke 3, 19-20), Jesus went from Judea to Galilee and there proclaimed the good news (the gospel) of God, and announced that the time had been fulfilled, the world was ready for a new order of things, and the Kingdom of God was at hand. More than a hundred times Jesus used the phrase "the Kingdom of God" or its equivalent; what did he mean by it? It is a phrase which in different meanings, being now present and now in the future, the rule of God in the hearts of men. Lo, the Kingdom is within you, Luke 17:21.

Jesus came preaching that this Kingdom was at hand. Most of his teaching was conversational, but he preached four great sermons, all of which concerned the coming of the Kingdom. In the first, he announced that it was his mission to initiate this Kingdom. In the second he interpreted the fundamental principles on which the Kingdom would be founded. In the third, he traced the method and process of its development. In the fourth, he declared the secret of its power, a divinely inspired spirit of self-sacrifice in the heart of all his citizens. At the end of his life, in the Court of Caesarea, he reaffirmed himself to be the long expected Deliverer coming to establish this Kingdom of God on the earth. And after his resurrection his disciples went forth to teach a new ethics or a new philosophy, but to proclaim their faith in the Kingdom and in Jesus its Founder.—Lyman Abbott.

Plan to Eliminate Fog

Airplanes to be Used Over Lake Michigan for This Purpose

Flying branches of the army and navy are greatly interested in expedients shortly to be made in Chicago to determine whether the fog over Lake Michigan can be eliminated by state electricity shot from airplanes.

Success will have an important bearing on the project for a \$3,000,000 airport on the lake front there. Unless the fog can be eliminated or greatly lightened, operation of the proposed airport would be much handicapped about one-third of the year.

Both the army and navy have conducted experiments along this line in the past with considerable success. Solution of the problem will be of great value to aviation in general.

Living Longer

Average Length of Life Is Now Placed at 58 Years

Is it true that everybody is living longer than his forefathers, and how does that happen? wondered Dr. Charles H. Hays, Mayor, hearers at Washington. The average length of life was twenty years in 1650; forty in 1850, forty-five in 1875; is fifty-eight now. This improvement is so, he declared, because people are learning to take better care of themselves. Said he: "The dangerous age of a woman is from 16 to 18. But no dangerous age of a man is from 50 to 55. If you can't keep your eye on them, lock them up. Gland transposition is the bunk."

Export Trade in Beef Cattle

Conditions Said to be Better Now Than for Some Time Past

The opportunity which Canadian breeders of beef cattle have to occupy the British market at the present time was stressed by Dr. J. H. Girdale, Deputy Minister of Agriculture, before the Agricultural Committee of the House of Commons and R. B. Rothwell, chief of the Animal Husbandry branch. With a reduction in rates and an increase in the buying power of the British public, conditions were better than for some time past, and they believed Western Canada had a great future in catering to the export trade.

Assistance to Settlers

The Manitoba Government, according to the Premier, will give special assistance to settlers within its borders this year. It will establish a bureau of information in connection with the plans for the development of unused agricultural lands. Several inspectors, acting under the Minister of Agriculture, will be appointed and will aid in placing new settlers in desirable locations.

To the destruction of the city of London by fire in 1666 may be traced the present system of fire insurance. The first company was formed at that time.

Ancient Laws And Modern Theories

Organized labor in the United States is now frankly out with a new objective, namely, the five day week. The Good Book tells that "Six days shalt thou labor," but an ingenious exponent of the Bible answers:

"Those who approve the five-day working week will probably say that the important command is 'thou shalt labor and do all thy work,' and that the 'six days' was the measure of time required in periods when there were no labor-saving inventions or quick transportation. Undoubtedly a man can do more work in five days now than he could accomplish in six days when he travelled by oxcart, rode a horse, or walked on footpaths, and when there were no labor-saving devices."

This is very plausible, but one wonders where it will all end. The food of the world obviously can not be produced from forty-four per week labor; transportation cannot be conducted on a forty-four hour per week basis, either on land or sea; nor can steel be produced for construction, home-building, and city-building on this labor basis. The farm is a seven day week proposition and must always remain so. Here we are up against a fact, not a theory and nothing can change it. Even the present urban scheme of work is highly inefficient by comparison.

The inevitable social and economic answer to a five-day week is an increase in the price of food products of so fantastic a nature as to render farming the most highly paid of human occupations. Or, as a first effort, spectacular rural depopulation, as a logical reaction to so attractive an urban scheme of life, followed by a period of wholesale starvation, leading to the high agricultural price level. Society obviously cannot exist with one-half of the people working forty hours, and the other half sixty-five strenuous hours per week, without one class paying the other ample compensation. Contrary to popular superstition, idleness and happiness are not synonymous terms. Natural laws will fix hours and cooperation in the end.

But Canada, being still in a comparatively undeveloped state, must for many years to come bid for additional rural population and must, therefore, see to it that the country side does not suffer unduly through a too unfavorable comparison between the rural and the urban working program even if it is only of a temporary nature. An over-reliance by agricultural country, such as Canada is, cannot with impunity increase the social burden of its agriculture in order to further improve the living conditions of its urban workers.

Princess Louise

Duchess of Argyll, Wife of Former Governor-General of Canada, Reaches Her Eightieth Year

Many Canadians of middle age who remember when Royalty held sway at Rideau House may be surprised to learn that the Princess Louise, Duchess of Argyll, has entered upon her eightieth year. It was near the close of the '70s that Her Royal Highness then the young and beautiful Marchioness of Lorne, came over to Canada with her husband, who had been appointed Viceroy of the Dominion. Four years previously the wedding of the Princess and Lord Lorne, son and heir of the Duke of Argyll, had taken place in St. George's chapel, Windsor, the bride being given away by her mother, Queen Victoria. The Duchess of Argyll, as she became upon the death of her father-in-law in 1909, spent several delightful years in Canada, and she has always entertained the most affectionate regard for Canada.

Would Tax Furs

Legislation empowering the Commissioner in Council, under the Northwest Territories Act, to make ordinances for the levying of an export tax upon furs exported from the Territories to any part of Canada, or to any foreign country, will be introduced at the present session of Parliament, according to notice given by the Hon. Charles Stewart, Minister of the Interior.

Alberta Co-Operative Credits

A million dollars, roughly, was advanced to the farmers of Alberta under the Co-operative Credits Act in 1926, according to the annual report of the working of that Act presented to the Legislature by Provincial Treasurer Hon. R. G. Reid. There were 43 societies with a membership of 1,155 farmers operating.

The verb "wallop" was added to the dictionary from the name of Sir John Wallop, a British soldier who inflicted some heavy defeats on the French.

Federal Government Hopes To Avert Strike Of Railway Employees

Ottawa. The Federal Government hopes to be able to avert a strike of freight handlers and clerks on the C.P.R. system, as threatened Sunday when steps were taken by the men's committee to make arrangements for the distribution of strike ballots.

Hon. Peter Homan, minister of labor is now in Montreal with the intention, it is understood, to make an effort to lure the men and the company to resume negotiations.

The employees are members of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

New York. An increase of 18 per cent, over the present wage schedule for all railway freight handlers and station employees of the New York Central Railroad has been handed down by the United States board of arbitration, according to an announcement by J. A. Robertson, for the Brotherhood of Railway Clerks. The decision will result in an annual increase of \$2,000,000 in wages.

The men asked for a 12 per cent. increase.

Italian Aviator May Come to Canada

De Pinedo May Include Dominion in His North American Flight

Montreal. Possibility of an extension of many thousands of miles of the North American continent part of the flight of the Italian aviator, Count de Pinedo, is held out. In a letter received here from Italy, under the new plan, if adopted, the aviator, instead of flying direct from New Orleans to Chicago and New York, would go via Galveston, San Diego and San Francisco, Seattle, Chicago, the province of Quebec in Canada and New York.

Commander de Pinedo is now on the Brazil part of his European Western Hemisphere flight and no date is set for his arrival in Canada.

Manitoba Elections

Understand That Provincial Vote Will Be Taken on June 22

Winnipeg. The Manitoba provincial elections will be held on June 22, it is understood, though no official proclamation has yet been made. Northern day will probably be June 22.

The standing of the parties in the legislature at present is: Government, 28; Liberals, 7; Conservatives, 6; Labor, 4; Independents, 8; vacancies, 2.

Air Mail for Canada

Ottawa. The Government intends to establish an air mail service and to extend it to Eastern and Western Canada as conditions warrant. Hon. Ferdinand Rinfret, Secretary of State, said in reply to a question in the House of Commons. He gave no details as to when a start would be made to establish this service.

A Picturesque Farewell

Wellington, N.Z. A quaint farewell message was sent by the Maori tribes to the Duke and Duchess of York who sailed for Australia after visiting New Zealand. The message reads: "Farewell to you, the snow white crane which flies but once in a lifetime, and to you, inestimable high born lady, good luck."

British Commons Discuss Migration and Settlement Within the Empire

London. A motion by Captain Repton, said the prospects for development in Canada were very bright.

Dr. L. D. Shields, Labor, Edinburgh East, although he declared himself an internationalist, said he would prefer to see Canada peopled by the British race. He reported that Central Europeans were welcomed there because they had a lower standard of living.

Mr. C. G. A. Avery, under secretary of state for Dominion affairs, made it clear that Britain was not concerned with Empire development in order to rid herself of responsibility to a single citizen of Britain. "Our policy," he said, "is the strengthening of the link of the national fabric and the helping of the development of the Empire."

To Represent Consumers

Council to Look After Interests of Consumers Before Tariff Advisory Board

Ottawa. A meeting of members of the House of Commons took the first step to provide that consumer representation be permanently before the tariff advisory board when applications for increased customs tariffs are heard.

During the past year consumer representation, represented by George Spence, (Liberal, Maple Creek), appeared on behalf of the consumers, the exchange being suggested by Mr. Spence, assisted by certain other members. However, the meeting was for the purpose of having a committee of members of the House look after it in the future. An executive was appointed but no statement was issued until the question could be more thoroughly canvassed, when another meeting will be called. There was a fairly large attendance of members not only from the West but from Ontario.

Limit Time of Speeches

New Rule of House Becomes Effective Next Session

Ottawa. New rules of the House of Commons will become effective next session, the house having adopted the report of a special committee.

The house in committee of the whole approved the rule limiting general speeches in the house during debates to forty minutes, after debating an amendment which would have added to exceptions under the rule "leaders of opposition groups." Under the new rule, no member, except the prime minister and the leader of the opposition or a minister moving a government order and a member speaking in reply immediately after such minister, or a member making a motion of "no confidence" in the government and a minister replying thereto, shall speak for more than forty minutes at a time on any debate.

C.N.R. Favorable Showing

Increase for 1923 of Net Earnings of Over 42 Per Cent.

Ottawa. Net earnings in 1923 of \$18,225,929, an increase of \$11,781,731 or 11.2 per cent, as compared with the preceding year, are shown in the annual report of the Canadian National system, tabled in the House of Commons by Hon. Charles Dunning, minister of railways and canals. The gross earnings of the system, including the lines of the Central Vermont, totaled \$275,570,310, an increase of \$21,561,536 over 1922, while total operating expenses increased only \$7,975,507.

Maritimes Are Pleased

Lowering of Transportation Costs Will Prove of Great Benefit

Ottawa. "The implementation of the Duncan report with regard to transportation costs and facilities will undoubtedly be a long step toward restoring a proper basis of transportation costs and services in the Maritimes," says a statement issued here by E. C. Cornell, who presented the case for the Maritime Government with regard to freight rates before the Duncan commission.

Mr. Cornell estimated that \$5,000,000 would be a conservative estimate of the amount involved in the rate reductions.

Pilot and Passengers Killed

Sydney, Australia. Pilot Davidson and two passengers were killed when a civil aviation plane crashed at Tambo, Queensland. Davidson who was a Great War pilot was making his first flight in this service.

British Officials Think Balkan Incident Closed

Dangerous Developments Averted by Action of Italian Government

London. British officials believe the latest Balkan war cloud has about blown over. This view is based on the conference between Sir Austen Chamberlain, the foreign secretary, and the Marquis della Torre at the foreign office, in which the Italian ambassador gave Sir Austen the reasons for Italy's alarm over the Albanian situation.

The marquis also expressed the view that it was largely due to the prompt action of the Italian Government in informing the powers of its suspicions of Jugo-Slavia's intentions toward Albania that dangerous developments were averted.

Downing Street considers the incident closed. It is felt in French diplomatic quarters that the moment now is ripe to seek to remove the cause of the trouble in the Balkans by a thorough examination of the situation created by the Treaty of Trianon.

The Jugo-Slav Government, it is known, has expressed willingness to accept such procedure and it is understood that Great Britain and France are disposed to use their good offices with the Italian Government in favor of having a frank exchange of views between Italy and the Belgrade Government.

Financial Panic at Tokio

Banks Unable to Pay Current Withdrawals Close for Adjustment

London. Despatches from Tokio to the Exchange Telegraph announce a condition approaching financial panic there. Three banks announced they had "closed for adjustment," making a total of five which have been unable to pay current withdrawals.

The Bank of Japan called a meeting of bankers to consider coping with the situation, which is considered grave but not critical, being attributed to uneasiness over the earthquake relief legislation now before the diet.

London. A Tokio dispatch to the Exchange Telegraph says the Japanese Government has stemmed the money panic by giving assurances of unconditional support for all banks. A timely Japanese bond subscription in the United States, it adds, has tended to materially to reassure the public.

Nevertheless, the nervous strain felt financial Tokio persisted and extremely apprehensive, and confidence will be necessarily slow in returning.

Appointment Satisfactory

Post Given to Sir Cranville Ryne Tribute to War Services

London. The appointment of Major General Sir Cranville Ryne as the new Australian High Commissioner in London, at Sydney has been received by Australians both in the commonwealth and in England with some pleasurable surprise. The post is regarded as given to Major General Ryne in part as a tribute to his service in the war. He was leader of the Light Horse in Gallipoli and Palestine.

Souvenir to Mark Jubilee

Dollar Coined From B.C. Silver Has Been Suggested

Vancouver. A silver dollar, coined from British Columbia silver was suggested and endorsed as a highly suitable souvenir of the sixtieth anniversary of confederation at the imperial organization meeting of the celebration committee. The suggestion was forwarded to C. G. Fowen, Ottawa, secretary of the executive committee for celebration of the diamond jubilee in Canada.

ENLARGEMENT OF THE CHATEAU LAURIER HOTEL

The illustration has been prepared from the architect's drawings showing the appearance of the Chateau Laurier at Ottawa when the new wing will have been added. The structural addition to the hotel will provide for another 200 rooms, making a total of 700 rooms available for guests. With the annex, banquet hall and bathroom space and other public rooms will be provided on proper scale, thus enhancing the usefulness of this fine unit of the Canadian National Railway hotel system.

British and American Troops Stand Together At a Crucial Moment

Grants To Universities

May Be Discontinued

Ontario Government Cannot Undertake to Maintain Three Says Premier

Toronto. This will be probably the last year in which the government of Ontario will advance large grants to Queen's University, Kingston, and the Western University, London, according to Premier Howard Ferguson, speaking in the Ontario legislature as minister of education.

The time has arrived, said the premier, when a high would have to be called in the grants to these institutions. They must not expect the province could further undertake to maintain three universities, and they must look to private sources for increased assistance.

Canada Has Exclusive

Use of Wave Lengths

Six Have Been Set Aside by Radio Commission

Washington. Six separate wave length channels have been set aside by the radio commission for the exclusive use of Canadian broadcasting stations.

The commission's order will make certain that no interference with them is tolerated while international negotiations are pending for a definite allocation of the other spaces between the U.S. and Canada.

The wave lengths set apart are: 291.1 metres, 312.3 metres, 329.5 metres, 359.9 metres, 467 metres, 531.5 metres.

No Reciprocity Agreement

United States Will Not Enter Into Any Pact With Canada, Says U.S. Senator

Washington. The United States will make no reciprocity agreement with Canada along the line suggested by Premier King, according to Senator Watson of Indiana, Republican leader.

The senator, who is a prominent member of the Senate Finance committee, said Canada in any such agreement would be in a position to trade with our eastern manufacturing goods and this was out of the question. He asserted the farmers of the United States would never, and for their feelings having been hurt by failure to get a tariff reduction.

Encourage British Film Production

London. By a vote of 213 to 127, the House of Commons gave sanction to the bill which seeks to encourage British motion picture production by compelling British movie houses to exhibit a set proportion of British-made films.

Chinese Will Be Held Responsible For Slaying Of Foreigners at Nanking

London. The British capital was shocked by news of the slaying of foreigners at Nanking, recalling the tragic days of the Boxer uprising.

Only the latest account have been received in official quarters and no definite information had been received as to the number of the foreigners killed or wounded. Government spokesmen declare the British Chinese will be held responsible for the attack. Premier Baldwin and the British were constantly in contact with the central Chinese government at Peking.

The rapidly developing events will largely be held in the hands of the British representatives of the spot and any action they deem necessary to protect life will be backed to the hilt.

Secretary of War Woodhington Evans told the House of Commons that another battalion of British troops was en route to Shanghai from Hong Kong but that no further change in the defence force there was planned at present. Additional British destroyers were ordered to Nanking from Shanghai.

Because of the great distance involved, officials say it would be useless to consider reinforcements from Great Britain in most of the existing attacks.

London. Participation by American marines with the British forces in the defence of the foreign settlement at Shanghai was touched upon by Chamberlain of the Exchequer in the course of an address.

"I am bound to say that I felt a strong feeling of confidence when I read of the Canadian Guards and the United States marines standing side by side," he said. "It looked to me as if once again the great unbreakable forces of progress, peace and civilization were reuniting all that they had in common and all that they would have in face to common."

The chancellor at a moment when the British action in sending a defence force to Shanghai, far from being spoiled the effects of a renewed concert of civilization, had preserved them and had been the only means of preventing massacre.

It is said that Mr. Chamberlain, in a strongly worded communication, was sending the value of China's assistance, in view of the inability of the Chinese commanders on the spot to exercise authority over the Nationalists.

Anti-American moral officers at Nanking were reported to have taken the same view as Mr. Chamberlain concerning China's ability to control the situation.

The joint declaration to hold salient military points in Nanking in the event that the Cantonese proved rebellious was described here as being based on the belief that such a move was necessary. The belief is held in foreign naval circles that it will have an excellent moral effect not only in Nanking, but all along the river.

Confusion in Broadcasting

Movement Advocated in U.S. to Eliminate Nuisance Stations

New York. Confusion in broadcasting due to cluttered English coast by the radio industry, according to L. P. Rogers, vice president in charge of the radio division of the National Electrical Manufacturers Association, in a report.

Mr. Rogers said that he was in favor of having the license of every station which caused the interference served for a minimum of one year, and that the government's agreement of the House conference of last year, and added that all nuisance stations should be eliminated.

Baldwin May Come With Prince

London. Premier Stanley Baldwin in connection with his visit to a friend of the Prince of Wales, may come to visit in Canada. He is expected to leave London at the end of July.

The Prince of Wales, who will visit the Prince and Princess of Wales, secretary for the Dominion, begins his preparation for leaving for South Africa in August.

Timber Supply Nearly Exhausted

Says Softwood Resources of Canada Will Be Depleted Within 25 Years

"A review of the forestry situation throughout the world leads to the conclusion that available supplies of the principal timber, or commerce, are rapidly approaching exhaustion," declares the second annual report of the Imperial Forestry Institute at Oxford, which mentions, among other startling facts, that the virgin softwood resources of Canada cannot last more than 25 years. The report summarizes the present situation as follows:

Nine tenths of the supply of pine, spruce, fir, and fir available to meet the huge world demand for softwoods, which constitute about 90 per cent. of the wood used for industrial purposes, are situated in North America, North Europe, and Siberia. In Europe one-third of the total land area is under forest, but because of the enormous quantities exported into Great Britain and other countries in the west of the continent, where the supply of home-grown timber is relatively small, the annual consumption of these softwoods exceeds the annual growth by about 2,000 million cubic feet for the time being, on account of difficulties of transport, prices, and, generally speaking, of their inaccessibility. The great forests of Russia and Siberia cannot be used for overhauling this deficiency. If these obstacles are overcome, the timber which they produce is more likely to be sold in China, Japan, and even to the United States, than in the west of Europe.

It is necessary, therefore, for Great Britain and the west of Europe to turn to the other chief source of supply in North America. But here again the prospects, and indeed the existing conditions, are the reverse of hopeful. Even in Canada, largely drained of its softwoods by the wood pulp industry, little is to be expected. Each year fire, insects, and disease destroy an amount of timber as great as that felled by the lumbermen, and only 27 per cent. of the original forest is left.

East of Winnipeg, much of the sawmill timber has already been consumed, and in British Columbia, which produces three-quarters of the total supply of the Dominion, it is estimated that the virgin softwood resources cannot last for more than twenty-five years. In the United States, which consume about half the timber of the world and incidentally provide a market for over four-fifths of the trade of Canada in forest products, the story is practically the same. Their original forest area has been reduced by more than one-half, their existing resources are given a life of only twenty-five years, and the harvest of timber from Canada increases as the Dominion shipments to Britain decline.

New Fire Apparatus

For Buckingham Palace

Old Fashioned Outfit Being Replaced by Up-to-Date Machinery

The last of the old and all other paraphernalia of the old-fashioned fire fighting outfit at Buckingham Palace is to be replaced by up-to-date apparatus.

The present outfit, which appeared, and modern gear operated by electricity have been installed to maintain and in event of emergency.

Notwithstanding the advanced fire prevention machinery long in use at the palace, there has not been a fire in the building for many years. This is attributed to construction and the fact that the buildings are guarded day and night.

The worst fire in the history of the royal houses was in 1698, when Whitehall Palace was destroyed.

Mount Ararat

Mount Ararat situated on the International Boundary between British Columbia and Alaska has an elevation of 8,776 feet. It is named after Hon. Mr. Justice John D. Armour, Chief Justice of the High Court of Ontario, who was one of the original Canadian members of the Alaska Boundary Tribunal in 1902.

Find Stone Age Relics

Hidden in a cave containing prehistoric relics of three different ages—stone, bronze, and iron age—have been found in the forest of Felsburg, Germany. Archaeologists have found pottery, quartz implements, bronze jewelry and weapons fashioned from bone. A fireplace had been built in one of the caves.

Denise: "Can you live within your salary?"

Percy: "Well, I know I cannot live without it."

W. N. C. 1971

Best Business in the World

Seems to be Attending Strictly to One's Own

John James was an old farm hand in Cornwall. For many years he had labored faithfully and silently, with only an occasional day off, and a week's vacation each year after harvest. It was John James' peculiar custom to spend his odd hours of work in visiting old graveyards; and when his annual vacation came around, John James, dressed in his Sunday best, would spend each day of his week in a different graveyard.

On returning from one of his solemn rounds of visitation he was greeted by a busybody woman of the village:

"Well, John James, I see you've got back again."

John James nodded grimly.

"Where you been—same old places?"

John James nodded again—still more grimly.

"Well," exclaimed the busybody, "whatever you find entertaining in graveyards I can't see. You're going to get there yourself soon enough, John James, and when you get there you're going to stay a long time. Why under the sun then do you want to go there now?"

John James straightened himself in his black broadcloth suit and bowler hat and gave the woman a stony glare.

"I spend my spare time in graveyards," he said, "because there are the only places where folks mind their own business."

Another and somewhat gentler way of putting the matter is that of the gracious "El zabeth," who has this to say in one of her recent books:

"There is a great virtue in sweeping out one's own house and trimming its lamp before starting on the house and lamp of a neighbor; and since new dust settles every day, and lamp, I believe, need constant trimming, I know not when the truly tidy soul will have attained so perfect a spotlessness as to justify its issuing forth to attack the private dust of other people."

As our experience with human nature widens through the years, and we come to realize how much trouble and vexation is caused by individuals concerning themselves unduly with other folks' affairs, the thought grows in us that perhaps the best business in the world may be simply that of minding one's own.

World's Largest Book In British Museum

Volume of Maps Was Presented to Charles II. in 1660

While the smallest books in the world, the Bion and London Almanack, were being sold at auction the other day, the world's largest book was being acquired for at the British Museum.

This is a huge tome, 5 feet, 10 inches high by 3 feet, 2 inches across. It was wheeled out on a trolley for inspection.

The reader found it to be a volume of maps presented to Charles II. by merchants at Amsterdam in 1660.

The binding is morocco, four skins being used for each panel. It is decorated in gold figures of lions, roses and crowns, with large bosses and clasps.

New Cargo For Airplanes

Dynamite Will Be Taken From Winnipeg to Fort Churchill

Airplanes, which have been used extensively in the northern mining areas and on forest patrol in the north country, will assume a new role shortly, that of dynamite carriers. A cargo of 800 pounds of dynamite will be taken to Fort Churchill by a plane chartered by the Dominion Government from a Winnipeg company. Arrangements are being completed for the usual shipment, and the plane will leave within a short time. The dynamite will be used by Dominion Government engineers who are to undertake an investigation at Fort Churchill Harbor. On later trips the plane will be used for the transportation of engineers and general supplies.

Pay to See Grapevine

Last year 28,000 persons paid an admission fee to see the King's 150-year-old grapevine at Hampton Court, England. It has produced as many as 2,200 bunches of grapes in a year. With its average crop now kept down to about 100 bunches it maintains remarkable vigor. The proceeds of the grapes sold, go into the Treasury, also the gate receipts of the thousands who pay a penny to see the vine.

Simson: "I can get anything on my radio that you can on your phonograph, and more, too."

Johnson: "Is that so? Let's see you tune in on 'Persimmon'."

Co-operative Marketing Pays

Alberta Farmers Market Eggs and Poultry Through Co-operative Association

In the year 1926 the Alberta Co-operative Poultry Producers Ltd., Calgary, Alberta, handled 223,132 dozen eggs, all of which were delivered by members who had signed producers' contracts. When eggs were received the association paid a price two cents below the prevailing market price, and later made final settlement. The year was divided into four pool periods. The first period was January and February when receipts were very light and overhead high, and the association was able to make an additional return of only two cents a dozen to producers. The next two periods included the months of heavy receipts during which 200,000 dozen eggs were handled, and producers received a final payment of four cents, or two cents above market price. As some of these eggs were placed in storage the final settlement had to be delayed till the stored eggs were sold. The fourth pool, extending from October 1 to the end of the year, contained but few eggs. A final price of 20 cents was paid and final settlement has not been made yet.

In addition to eggs the association handled 113,700 pounds of turkeys, and 268,923 pounds of chickens, geese and ducks. Final payments brought the returns for turkeys two cents above prevailing quotations, and for chickens, one cent above market prices.

Extending the Wheat Line

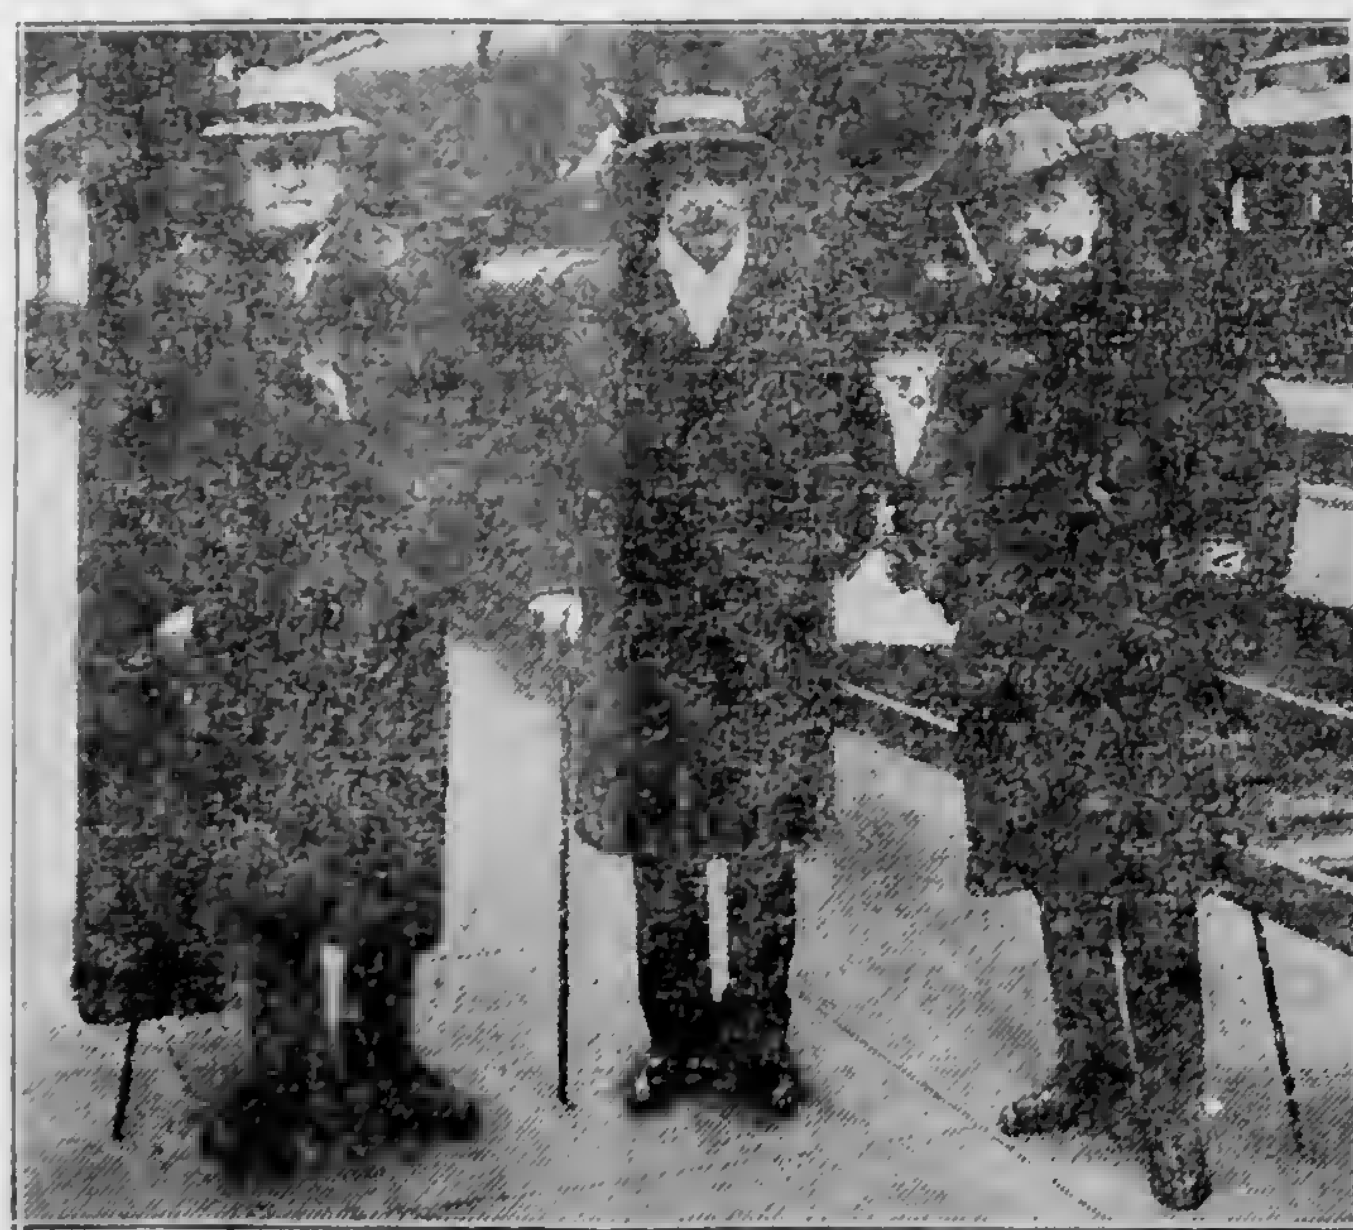

Discovery of Garnet Wheat Makes Possible Production of Wheat Further North

A gain of a million dollars to western wheat growers with the extension of the wheat line further north than ever before, and possible cultivation of millions of acres in certain districts, through the discovery of Garnet wheat, is forecast in a bulletin on Garnet published by L. H. Newman, Chief Dominion Cerealist at the Central Experimental Farm, Ottawa. Garnet, which is a hard, red spring wheat, like the famous Marquis wheat, is a discovery of the Central Experimental Farm, and the bulletin shows the results of tests and informs growers generally in regard to this new variety of wheat.

Ancient Dish Revived

A meal within a meal, to parody a well-known phrase, might describe a dish which was served at a medieval supper at the recent Chelsea Arts Club ball. This was "Babbly Jack," a favorite dish in Yorkshire 300 years ago, made by stuffing a goose with a chicken, the chicken with a pigeon, the pigeon with a lamb, and the lamb with a quail, all baked and cooked together.

If you can't marry the one you love try to love the one you marry.

Ministers Come to Montreal

Hon. W. R. Motherwell, Minister of Agriculture; Robert Forke, Minister of Immigration; and Chas. A. Dunning, Minister of Railways photographed at the Windsor street station of the Canadian Pacific Railway at Montreal recently where they arrived from Ottawa with twenty-eight western members of Parliament to stay the day in the city. They were as follows: A. L. Beaulieu, Provencher; T. W. Blair, Nelson; Edgar Bisset, Springfield; John L. Brown, Lisgar; John S. McFarland, Winnipeg; Robert Milne, Neepawa; James Steadman, Souris; William J. Ward, Dauphin; Chas. E. Bethwell, Swift Current; Dr. Thomas Donnelly, White Birch; George W. McPhee, Yorkton; John Miller, Qu'Appelle; J. Gordon Ross, Moose Jaw; George

Earth Waves Form Mountains

Strip of Land Forming West Coast at One Time Is Now Submerged

Existence of great mountain ranges with the prospect of obliterating them again in the course of time, is claimed by Dr. E. C. Andrews, noted geologist to Yale University, where he will deliver a course of lectures on the geology of the Pacific.

Dr. Andrews does not take credit for the discovery himself, stating that it has been determined by Canadian geologists that there is a great strip of land lying below the surface of the ocean west of the present Canadian coast line which at one time was a part of the continent.

This huge area, said Dr. Andrews, was submerged in the undulatory motion of the earth, and its presence has been detected now only through depth soundings and other scientific forms of research.

"A great strip of land existed where there is sea today," said Dr. Andrews. "It was submerged at the same time as the great coastal ranges of mountains arose. Historically old, the Selkirk and Rockies are geologically very young. Their rising was coincident with the sinking of the great territory of the west from the extreme end of Alaska down to the United States border, passing west of Vancouver Island."

Canada Importing Wool

Producers and Weavers to Get Together With the Object of Furthering Home Industry

Wool growers and wool manufacturers will be brought together by the National Research Council of Canada, a Dominion Government institution, which has announced that wool is the next product to be investigated. The Council will work under the direction of Dr. H. M. Tory, of the University of Alberta. It is claimed that for reasons wise or otherwise, certain manufacturers have been prejudiced against Canadian wool in the past, and while big strides have been made in more recent years to bring the producers and weavers together, this country is still importing more wool than is grown at home. The Research Council proposes to make a study of the various grades of domestic wool and determine the best use for each. It is admitted that for one or two purposes the Canadian product is not suitable, but in nine cases out of ten it is said to be the equal of any in the world.

Two of the greatest shopping streets in Paris are the Rue de la Paix and Rue St. Honore.

A hand tool for re-threading badly worn screws has been invented in England.

A college education seldom hurts a man if he's willing to learn a little something after he graduates.

Foolish sayings now and then are uttered by the wisest men.

The Golden Age

At What Age of Life Does Man Accomplish His Best Work

Among the numerous questions Thomas Edison was asked on his eightieth birthday was this: At what age is a man most productive? He answered at thirty-five. With due respect to his own wide experience, it ought to be said that he was merely giving a personal opinion. At about that time in his life he probably felt his mental and physical powers at their highest and working in the happiest co-ordination. Five years earlier he had invented the phonograph, and at thirty-five opened in New York the first commercial electric lighting system. He made important inventions earlier and still more important ones later. He was forty-four when he invented the moving picture camera, one of the pillars upon which the whole moving picture art and industry depends. It is impossible to predict of a given man at what period of life he will produce his most important work, but statistics have been compiled which show the averages. Some years ago W. A. N. Dorland, as quoted in the Providence Journal, found out that the world's masterpieces were produced, on the average, at the age of fifty. As a rule the great discoveries of chemists and physicists were made at the age of forty-one, while the naturalists and jurists at the time of their most important contributions to their arts and sciences were fifty-eight. The poets produced their masterpieces at the age of forty-four. Since poetry is so much a matter of intense feeling, much of the very finest has been the work of young men, though Thomas Hardy is a remarkable instance of a poet who well past eighty can remember and powerfully express the intensest passions of youth. Mall and Rudre.

Prince Saves Pet Dog

Prince of Wales Risks His Life When Dog Is In Danger

How the Prince of Wales recently risked his life to save his pet cairn terrier "Corra" from death under the wheels of an express train, is a story that has just leaked out of Melton Mowbray where the Prince makes his fox hunting headquarters.

According to witnesses of the incident, "Corra" who is a feisty terrier presented to the Prince during his American tour in 1921, suddenly sprang from the Prince's arms as a London express train raced into view. The dog jumped from the platform to the tracks in the path of the approaching train.

Shouting to the Prince to stand where he was, two Scotland Yard detectives set out in pursuit of the dog. But the Prince dashed past them and, scooping his pet from the tracks, vaulted back on the platform bare seconds before the express dashed by. The narrowness of his escape brought a thrill of terror to a score of persons on the platform.

Lord Willingdon's Tribute

Testifies That Women Are a Great Help to Men in Public Affairs

When a diplomat of Lord Willingdon's wide experience testifies that women are a great help to men in the administration of public affairs, it is only common sense to take heed. His Excellency the Governor-General is not a man given to haphazard statements. When he says women have brought the quality of sympathy into public life, it is easy to understand what he means. The fact that this very quality might conceivably prove somewhat of a handicap in moments of grave national crisis by no means invalidates its value, as a general principle. "If we work together for the common purpose and good we shall raise the spirit and soul of Canada," says His Excellency, "and arrive nearer the ideal of brotherhood and sisterhood of all nations of the world." Truly a noble ideal that may well engage the attention of thoughtful men and women everywhere. Montreal Star.

Home-Made Mash for Baby Chicks

Home-made mash has proved to be very successful and considerably more profitable than commercial mash in tests in feeding baby chicks conducted at the Morden, Manitoba, Experimental Station. The home-made mash used consisted of equal parts of bran, shorts, corn meal, oat flour and meat scrap and cost \$2.50 per 100 pounds against \$6.40 paid for the commercial mash. Both lots received the same scratch feed and were given equal quantities of butter milk. In all the experiments the home-made mash made the greater gains in weight at considerably smaller cost than the patented commercial mash.

Of the twenty-two million dollars made in the United States during 1925, only about one million were made in Canada.

Depending On Prairie Provinces

Are Responsible for Prosperity of Dominion Is Opinion of Winnipeg Mayor

"After travelling from coast to coast and studying the question from many angles I have come to the conclusion that the three prairie provinces are responsible for Canada's prosperity as a whole," was the statement of Mayor R. H. Webb, Winnipeg, in addressing the Calgary Board of Trade recently. "Without the prairie neither the Pacific coast or Eastern Canada would function very far," he asserted. Mayor Webb dealt at some length on the question of transportation, suggesting that they should not fight or buck the railways but to co-operate with them and pointed to the importance of the development of waterways, and of improved highways.

"Alberta today has got Prince Rupert and Vancouver and to a very large extent you have solved a certain proportion of your transportation problem by opening of the Panama Canal, but that does not mean you should rest there," he said. "You have got to help Saskatchewan and Manitoba to solve their problem."

"We find Minneapolis and St. Paul today spending millions of dollars in making those cities seaports," he said, "and they are today connected directly with the sea and it has put Winnipeg within 500 miles of ocean ports."

Mayor Webb pointed to what could be done in the development of river and canal transportation with boats fitted with caterpillar transmission, boats that would carry 1,000 tons of freight but only drawing 16 inches of water.

How the Eye Reads

Chinese System of Starting at Bottom of Page and Reading Upwards Is Best for the Eye

When the eye runs along a line of print in a book, it does not travel smoothly from left to right of the page, but jumps from time to time, taking in a whole word or, perhaps, a few words at a time, and then jumping on to a fresh group.

If the eyeball is illuminated with a ray of light, which it reflects back again on to a moving photographic plate, the photograph will show exactly, in the form of a number of little stripes, or bands, what movements the eye has made.

These photographs, made with a special instrument used at the psychology laboratories at Stanford University, have enabled those studying the languages of the world to make a very fascinating discovery. This is, that the eye finds it much more comfortable to read from the bottom of the page to the top than from left to right, and so we find that the ancient Chinese, some of the earliest people to invent writing, had the wonderful sense to adopt the most suitable style of writing, for they started at the bottom of the page and wrote upwards.

Another interesting discovery from the study of these photographs is that the eye never bothers to begin reading a line of print from the very beginning, nor does it ever travel right to the end. It focusses itself on the second or third word of a new line, takes in a little picture of the meaning, and then skips on to the next stopping-place—"My Magazine."

Potential Water Power

The power available for the development of natural resources is a conspicuous feature of Canadian economies. Water power in abundant quantity is available from coast to coast not only near the present centres of industrial development but also in or near the areas of metallic minerals and timber reserves. In the comparatively small areas where the water power is limited, viz. in the southern portions of Alberta and Saskatchewan and in the Maritime Provinces, there are enormous resources of coal and lignite. Water power is abundant in conjunction with both the forest and metallic mineral resources in all parts of Canada.

Survey Northern Points

Owing to the increasing traffic along the McKenzie Valley system of waterways, the Department of the Interior has for several years had parties of surveyors at work along the route, particularly in Great Slave lake and Slave river. From these surveys, maps have been prepared which have proved most useful to navigators. Rafts, beacons, and lights have also been put in place along the route.

Fencing is indulged in by many young women in France as an aid to health and grace.

It's a man's weakness that finally overpowers his strength.

Send the kiddies to the matinee Saturday and see "The Devil Horse, Kids 10c".

The M. I. A. Stake try-out in literature and music will be held tonight in the Stake House. The winners of the contest held recently in Raymond and Magrath will be the competitors. The events will include, organ solos, male quartettes, public speaking and girls choruses. As the best talent in the stake will compete, the program is certain to be one worthy of an overwhelming attendance.

UNITED CHURCH Services—

Notice

NOTICE is hereby given that, in accordance with the provisions of the Irrigation Act the undersigned has filed the necessary memorial and plans required by sections 13 and 15 of the said act, with the Commissioner of Irrigation at Calgary, Alta.

The applicant applies for the right to divert sufficient water from Pothole creek at a point on the southeast quarter of section 26 township 5, range 22, west of the 4th meridian, for irrigation purposes, and for the right to construct the necessary works, as shown by the memorial and plans filed, to enable the water so diverted to be used for the said irrigation purposes, on the following lands viz:—lots 2, 7 and 8, block 67, and lots 5, 6 and 7, block 66 (Magrath).

Dated at Magrath, Alta., this 26th day of March, 1927.
Elizabeth N. Lacquemant,
Applicant.

News Notes

Froben Dahl returned home last Friday from a two years mission spent in eastern Canada.

Mrs. S. Davidson is here visiting her parents, Mr. and Mrs. Riley Weaver.

Students of grade ten played a practical April fool joke on their teachers by leaving dummies in their respective seats. However as one dummy is very much like another, the instructor probably did not notice a great deal of difference when he opened class. Regarding the witty(?) taunt handed to the Recorder for publication by the students, perhaps it would not be amiss to remind them that parodies on verses taken from the Holy Book are not exactly in good taste.

The value of Betulaeae and pulp as stock food was demonstrated by a carload of steers exhibited at the Calgary Stock Show by cattle-buyer Fleming. These steers were fattened on pulp and Betulaeae from the local sugar factory and won fourth place at the exhibit.

Miss Cora Jeffery has resumed her old position on the Mere staff.

Mr. and Mrs. David Watson and family desire to thank the many kind friends who aided them during the recent illness and death of their child.

Mr. and Mrs. Jas. H. Walker attended the conference at Salt Lake City.

Mr. and Mrs. A. Erickson returned last Monday from a visit of several months to Salt Lake City.

L. L. Anderson purchased a Studebaker custom sedan from R. Orgill last week.

NOTICE

NOTICE is hereby given that under the provisions of The Water Users' Districts Act, 1920, the undersigned has been appointed to hold an election of three duly qualified persons to compose the board of managers of the Water Users' District of Factory Lake, which comprises the following area: Parts of 22, 27, 28, 29, 33, 34—6—20—W4.

The persons entitled to vote are the members of the Water Users' Association of the said District, i.e., such persons as are of the full age of twenty-one years, who are occupiers of land situate within the district.

Now therefore the electors so qualified to vote are hereby notified to attend at the Raymond Town Hall on the 12th day of April, 1927, at the hour of ten o'clock in the forenoon at which hour and place I will proceed to receive nominations for persons to serve as such managers, and if at the hour of eleven o'clock in the forenoon of the said day more than three persons have been nominated I will forthwith proceed to hold a poll and receive the votes of persons qualified to vote which poll will continue open until and close at the hour of five o'clock in the afternoon of the said day at which time I shall declare the result of the poll.

Dated this 4th day of April, 1927.

J. R. HICKS, Returning Officer.

Important To Beet Growers

Some beet growers have already harrowed their beet land twice this spring. Others have not yet awakened to the fact that springtime is here, and that the soil should be stirred up so that it will become aerated and warmed by the sunshine, and drifting and baking prevented.

What was done with the land in 1926 will largely determine how it should be handled this spring. However, it should be cultivated harrowed or disced just as early as the soil will permit the farm tool used to work in it without injuring its mechanical condition.

The following suggestions may be helpful in preparing our land for the beet drill this season:

SUMMERFALLOWED LAND should be harrowed with a spike-tooth harrow weighted or ridden by the teamster, then levelled and harrowed at least twice and more if necessary to bring the moisture close to the surface.

OLD BEET LAND should be double disced early and harrowed
